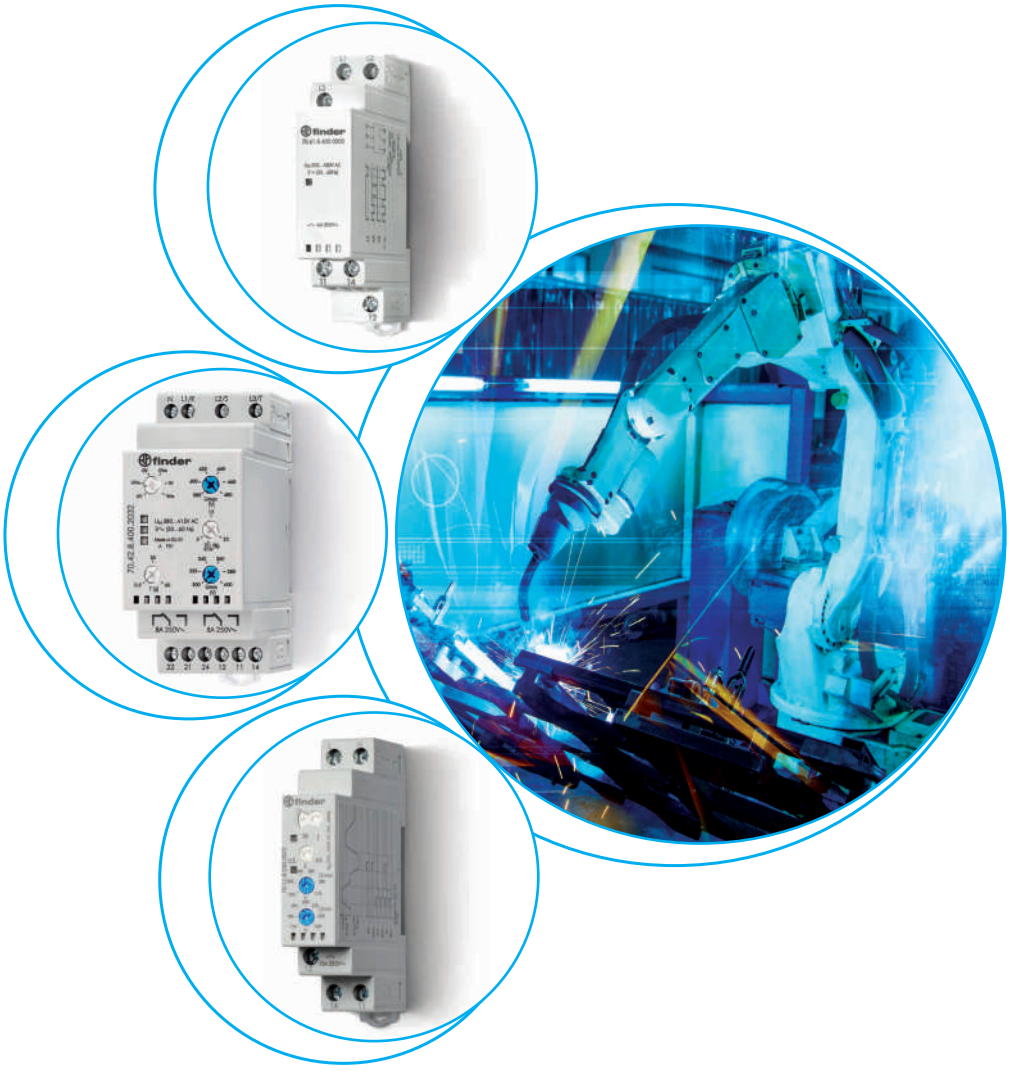
Line monitoring relay

70
SERIES

- Air conditioners
- Wood-processing machines
- Hoists and cranes
- Escalators
- Control panels for pumps
- Forced-air ventilators



Electronic voltage monitoring relays for single and three-phase applications

- Multifunctional types, providing the flexibility of monitoring Undervoltage, Overvoltage, Window Mode, Phase rotation, Phase loss
- Positive safety logic - Make output contact opens if the relay detects an error
- All functions and values can be easily adjusted by the selector and trimmer on front face
- "Blade + cross" – both flat blade and cross head screw drivers can be used to adjust the regulators and the function selector
- Colored LEDs for clear & immediate visual indication
- 1 CO relay output, 6 or 10 A
- Modular housing, 17.5 or 35 mm wide
- 35 mm rail (EN 60715) mount
- Cd-free contact material

Screw terminal

Electronic phase loss and rotation monitoring relays for three-phase applications

- Universal voltage monitoring (U_N from 208 V to 480 V, 50/60 Hz)
- Phase loss monitoring, even under phase regeneration
- Positive safety logic - Make contact opens if the relay detects an error
- 2 versions:
  1 CO relay output, 6 A (17.5 mm wide), and
  2 CO relay output, 8 A (22.5 mm wide)
- 35 mm rail (EN 60715) mount
- European patent pending for the innovative principle at the root of the 3 phase monitoring and error survey system (70.61)

Ordering information

Example: 70 series, three-phase voltage monitoring relay, 1 output, supply voltage 380…415 V AC.

7 0	.	3	1	.	8	.	4 0 0	.	A 2	.	B 0	.	C 2	.	D 2

Series

Type
1 = 1 phase AC line monitoring
3 = 3 phase AC line monitoring
4 = 3 phase + neutral AC line monitoring
6 = 3 phase loss and rotation monitoring

No. of poles
1 = 1 pole
2 = 2 pole

Supply version
8 = AC (50/60 Hz)

Supply voltage
230 = 220…240 V (70.11)
400 = 380…415 V (70.31/41/42)
400 = 208…480 V (70.61/62)

A: Detection values
0 = Non-adjustable detection values
2 = 2 adjustable detection values

B: Contact circuit
0 = CO

C: Time delay setting
0 = Fixed switch-off delay
2 = Adjustable switch-off delay
3 = Adjustable switch-off delay and asymmetry

D: Fault memory option
0 = No fault memory
2 = Fault memory function selectable

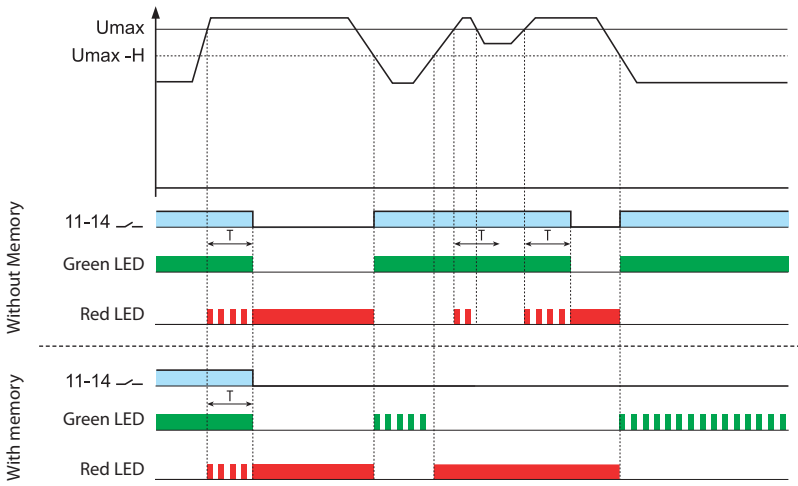
Functions

Output relay On (NO closed) when all OK: positive logic.

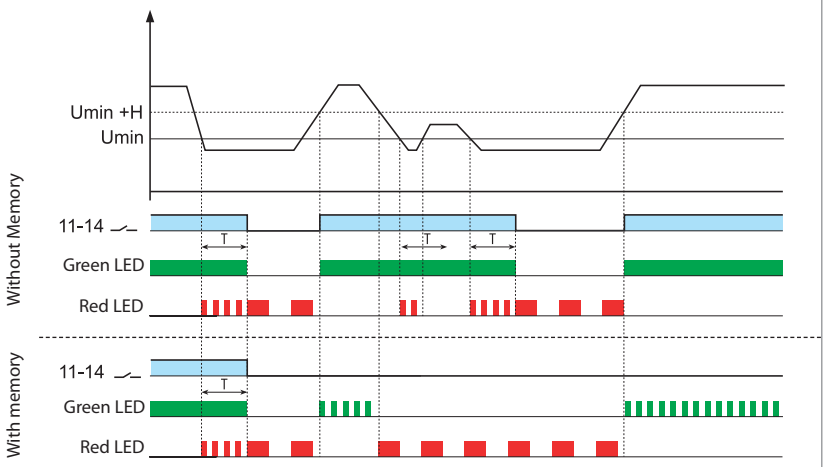
Type
70.11
70.31
70.42

Overvoltage (OV and OVm functions)



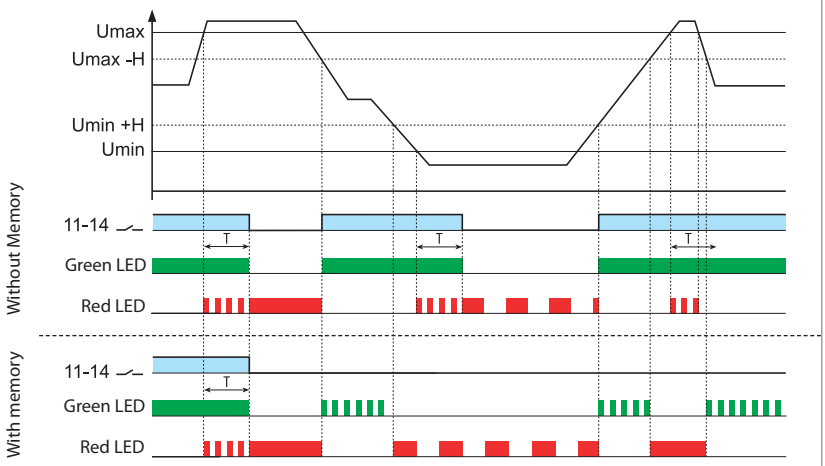
Type
70.11
70.31
70.42

Undervoltage (UV and UVm functions)



Type
70.11
70.31
70.41
(70.41 without memory)
70.42

Window mode (overvoltage + undervoltage, W and Wm functions)



Functions

- = Output contact (11-14, 21-24 for 70.42 only)
- OV = Overvoltage
- OVm = Overvoltage with memory
- UV = Undervoltage
- UVm = Undervoltage with memory
- W = Window mode (OV + UV)
- Wm = Window mode (OV + UV) with memory
- H = Hysteresis

If the voltage moves out of limits, following delay **T** the output relay turns Off.

When the voltage is again within limits (± the Switch-on hysteresis **H**):

- if set in the "without memory" position, the output relay "recovers", i.e. it turns On (after the Switch-on lock-out time) without any memory of the previous event.
- if set in the "with memory" position (70.11, 70.42 and 70.31 only), the output relay remains open. To reset, it is necessary to switch the supply Off and then On again, or to rotate the selector first to an adjacent position and then to the original position.

E

Functions

Output relay On (NO closed) when all OK: positive logic.

Type		
70.31 **70.41** **70.42** **70.61** **70.62**	**Phase loss and phase rotation** 	If the sequence (L1, L2, L3) is incorrect at power-on, the output relay will not turn-on. If a phase is lost, the output relay turns off immediately. When the phase is again active, the output relay turns on immediately. Phase loss monitoring possible even under regeneration up to 80% of the average of the other 2 phases.
Type **70.41** **70.42**	**Neutral loss and asymmetry** 	If the neutral is lost (and the Neutral control function is set), the output relay turns off immediately. When the neutral is again present, the output relay turns on immediately If the asymmetry (U_{max} - U_{min})/U_N is above the % set value, the output relay turns off after the set delay **T**. When the asymmetry is again below the % set value (with a fixed hysteresis of approximately 2%), the output relay turns on after the Switch-on lock-out time.
